Adjustable floor outlet BA-V....

Preliminary remarks

The adjustable floor outlet is a further development of the tried and tested floor twist outlet for commercial rooms from KRANTZ KOMPONENTEN. A built-in adjustment device enables it to be used as a floor twist outlet with high-turbulence vertical flow or as a floor displacement outlet with low-turbulence, circular, horizontal supply air dispersion. Patent rights have been issued.

Construction design and function

The adjustable floor outlet consists of the circular discharge element **1** with 12 outer discharge slots **1a**, 6 inner discharge slots **1b** and an adjustment disk **1c**.

When the adjustment disk is in upper position, the inner slots are closed. The air outlet operates as a **floor twist outlet**. The supply air flows solely through the outer slots (Figure 1, above). A vertical upflow with single twisted, high-turbulence jets is formed with a good induction effect. This results in a turbulent mixing air flow with rapid velocity reduction and fast equalization of supply air temperature and indoor air temperature.

If the adjustment disk is in the lower position, the supply air is discharged through the inner and outer slots. The air outlet operates as a **floor displacement outlet**. The special shape of the discharge slots deflects the air jets, which slide along the floor (Figure 1, below). The result is a low-turbulence, horizontal, radial supply air flow at low velocity.

It is easy to switch locally by hand from floor twist outlet operation to floor displacement outlet operation. Due to the jet pattern of both modes of operation maximum indoor air velocities at the seats are well below the permissible levels to DIN 1946, Part 2.

The adjustable floor twist outlet accessory is the distributor basket **2** for even air supply. There are two types to choose from:

- Standard distributor basket with optional throttle device for reduction of air outlet volume flow rate.
- Short distributor basket, best for low raised floors, without throttle device.

The adjustable floor twist outlet is inserted in the stepped bore of conventional raised floor systems. A clamp insert is available for installation in the through bore. This can be fastened with a clamp nut **5a** or claw fastener **5b** to the floor tile.¹⁾

Air is supplied either directly from the cavity floor or via a connection box with flexible tubing.

- The sound power level and pressure loss pertain to the use of the VSD distributor basket. Pressure loss and sound power level for the VK distributor basket are approximately the same or remain within the permissible measuring tolerance.
- The throttle device in the VSD distributor basket enables continuous reduction of air volume rate, preferably up to 50% as well as full shutoff
- Without connection box

Technical data

General	
Air volume flow rate:	5.5 – 14 l/s (20 - 50 m ³ /h)
Nominal diameter:	DN 150
Min. seat spacing:	1 m
Bearing strength: ¹⁾	800 kg
Mode of operation as	
– Floor twist outlet	
Max. temperature difference supply air-return air:	± 10 K
Min. air outlet spacing:	approx. 0,3 m
Supply air temperature:	18 - 30 °C
– Floor displacement outlet	
Max. temperature difference	
Supply air-indoor air (at a height of 1.2 m):	- 1 K to - 4 K
Supply air temperature:	≥ 20 °C
Coverage radius:	4 to 5 m

Figure 2: Adjustable floor outlet, installation example with clamp insert in floor tile, VSD distributor basket and connection box

Features

- Suitable for turbulent mixing air flow and displacement ventilation, respective jet pattern manually adjustable locally
- Installation in conventional raised floor systems
- Air supply direct from the pressurized plenum or via connection box with flexible tubing
- Stable jet pattern at volume flow rate of 5.5 to 14 l/s (20 to 50 m³/h)
- Can be used as a floor twist outlet for temperature differences between supply air and return air of up to ± 10 K and as a floor displacement outlet for temperature differences between supply air and indoor air of -1 to -4 K.
- Low sound power level
- Min. distance between air outlet and seat approx. 1 m
- Floor installation by insertion in a stepped bore or installation with a clamp insert in a through bore of floor tile
- Fastening of clamp insert to floor tile either with claw fastener or clamp nut
- Different distributor baskets available
- Air outlet element, clamp insert and distributor baskets made of polycarbonate, connection box made of galvanized steel
- Can be walked over, driven over and can support a wheelchair

Tender text ¹⁾

..... unit
 Adjustable floor outlet,
 suitable as floor twist outlet for generating high-turbulence vertical flow or as a floor displacement outlet for low-turbulence, radial horizontal flow, installed in conventional raised floor systems, consisting of:

Discharge element with radial discharge slots and built-in adjustment device for mode selection from floor twist outlet to floor displacement outlet operation and vice versa, structured surface,

Standard distributor basket with surrounding slots in basket casing including throttle device.

Short distributor basket with surrounding slots in basket casing, best for low raised floors; without throttle device.

Clamp insert for installation in through bore of floor tile, with clamp nut, with claw fastener.

Connection box for direct connection of air outlet unit to a flexible tube, with V-damper, adjustable from room.

Air outlet can be walked over, driven over and can support a wheelchair

Technical data:

Volume flow rate: l/s (m³/h)
 Perm. sound power level: dB(A) ref. 10⁻¹² W
 Bearing strength ²⁾: 800 kg

Materials

– Air outlet element: polycarbonate
 – Clamp insert: polycarbonate
 – Distributor basket: polycarbonate
 – Connection box: galvanized steel

Colour of visible air outlet parts:

coloured similar to RAL 7037, dust grey;
 (other colours on request)

Make: KRANTZ KOMPONENTEN
